

Amendments to the Claims:

Please amend the claims as shown below. This Listing of Claims will replace prior versions, and listings, of claims in the application.

Listing of Claims:

1. (Currently Amended) A method executed by a server capable of communicating with a client device and a printer device through a network, the server, the client device and the printer device each being a different device apparatus from the other, the method comprising:
 - receiving a printing request from the client device;
 - transmitting print data to the printer device without going through the client device, selected in the client device in accordance with the received printing request; and
 - transmitting, to the client device, address information for causing the client device to ~~access the printer device and~~ acquire, from the printer device without going through the server, a Web page provided by the printer device, the Web page indicating displaying a state of processing of the transmitted print data, wherein the client device acquires the Web page from the printer device in accordance with the address information and displays the state of processing of the print data in accordance with the Web page; and
 - ~~allowing the client device to access the printer device and display the Web page in accordance with the address information.~~

2. (Currently Amended) A method according to Claim 1, further comprising authenticating that the printing request is a printing request from a valid user, wherein, if the printing request is the printing request from the valid user, the server transmits the print data to the printer device.

3. (Previously Presented) A method according to Claim 1, wherein the printer device combines print form data and the print data transmitted by the server in order to generate image data for printing.

4. (Currently Amended) A method according to Claim 1, wherein the address information for causing the client device to ~~access the printer device and~~ acquire the Web page from the printer device comprises a uniform resource identifier of a Web page indicating the state of processing of the transmitted print data.

5. (Previously Presented) A method according to Claim 4, wherein the client device displays the state of processing of the print data in a Web browser in accordance with the Web page acquired by the client device.

6-7. (Canceled)

8. (Currently Amended) An information processing device capable of communicating with an external device and a printer device through a network, the information processing device, the external device and the printer device each being a different device ~~apparatus~~ from the other, the information processing device comprising:

a request receiving unit configured to receive a printing request from the external device;

a data transmission unit configured to transmit print data to the printer device without going through the external device ~~selected in the external device~~ in accordance with the printing request received by the request receiving unit;

a transmission unit configured to transmit, to the external device, address information for causing the external device to ~~access the printer device and~~ acquire, from the printer device without going through the information processing device ~~apparatus~~, a Web page provided by the printer device, the Web page indicating displaying a state of processing of the print data transmitted by the

data transmission unit, wherein the external device acquires the Web page from the printer device in accordance with the address information and displays the state of processing of the print data in accordance with the Web page; and
~~a control unit configured to allow the external device to access the printer device and display the Web page in accordance with the address information.~~

9. (Currently Amended) An information processing device according to Claim 8, further comprising an authenticating unit configured to authenticate that the printing request is a printing request from a valid user, wherein, if the printing request is the printing request from the valid user, the data transmission unit transmits the print data to the printer device.

10. (Previously Presented) An information processing device according to Claim 8, wherein the printer device combines print form data and the print data transmitted by the data transmission unit in order to generate image data for printing.

11. (Currently Amended) An information processing device according to Claim 8, wherein the address information for causing the external device to ~~access the printer device and~~ acquire the Web page from the printer device comprises a uniform resource identifier of a Web page indicating the state of processing of the transmitted print data

12. (Previously Presented) An information processing device according to Claim 11, wherein the external device displays the state of processing of the print data in a Web browser in accordance with the Web page acquired by the external device.

13. (Currently Amended) A non-transitory computer-readable medium having a program stored thereon for controlling a computer of a server capable of communicating with an external device and a printer device, the server, the

external device and the printer device each being a different device apparatus from the other, the program causing the computer to execute a method comprising:

receiving a printing request from the external device;

transmitting print data to the printer device without going through the external device, ~~selected in the external device~~ in accordance with the received printing request;

transmitting, to the external device, address information for causing the external device to ~~access the printer device and~~ acquire, from the printer device without going through the server, a Web page provided by the printer device, the Web page indicating displaying a state of processing of the transmitted print data, wherein the external device acquires the Web page from the printer device in accordance with the address information and displays the state of processing of the print data in accordance with the Web page; and

~~allowing the external device to access the printer device and display the Web page in accordance with the address information.~~

14. (Currently Amended) A non-transitory computer-readable medium according to Claim 13, wherein the method further comprises authenticating that the printing request is a printing request from a valid user, wherein, if the printing request is the printing request from the valid user, the server transmits the print data to the printer device.

15. (Currently Amended) A non-transitory computer-readable medium according to Claim 13, wherein the printer device combines print form data and the print data transmitted by the server in order to generate image data for printing.

16. (Currently Amended) A non-transitory computer-readable medium according to Claim 15, wherein the address information for causing the external device to ~~access the printer device and~~ acquire the Web page comprises a

uniform resource identifier of a Web page indicating the state of processing of the transmitted print data.

17. (Currently Amended) A non-transitory computer-readable medium according to Claim 16, wherein the external device displays the state of processing of the print data in accordance with the Web page acquired by the external device.

18. (New) An information processing device according to Claim 8, further comprising:

a print data generating unit configured to generate the print data, wherein the data transmission unit transmits the print data generated by the print data generating unit to the printer device.

19. (New) An information processing device capable of communicating with an external device and a printer device through a network, the information processing device, the external device and the printer device each being a different device from the other, the information processing device comprising:

a request receiving unit configured to receive a printing request from the external device;

a data transmission unit configured to transmit print data to the printer device without going through the external device, in accordance with the printing request received by the request receiving unit;

a transmission unit configured to transmit, to the external device, a Web page, the Web page indicating a state of processing of the print data transmitted by the data transmission unit, wherein the external device displays the state of processing of the print data in accordance with the Web page.

20. (New) An information processing device according to Claim 19, further comprising:

a print data generating unit configured to generate the print data, wherein

the data transmission unit transmits the print data generated by the print data generating unit to the printer device.

21. (New) An information processing device according to Claim 19, further comprising:

an acquiring unit configured to acquire a Web page provided by the printer device from the printer device, the acquired Web page indicating the state of processing of the print data transmitted by the data transmission unit; and

a processing unit configured to process the Web page acquired by the acquiring unit, wherein the transmission unit transmits the processed Web page to the external device.
